### Private or public?

In terms of cloud deployment models, the private model and the public model are on the opposite ends of the spectrum. Therefore, it's crucial to understand the difference between the two. If you know the strengths and drawbacks of each, then you can better decide on the best deployment model for a given use-case, even if it's something in between like the hybrid, community, or multicloud model!

✓

Instructions

100XP

Classify the statements into the model that it best describes.

 Take Hint (-30 XP)

Drag the items into the correct bucket

Drop items here

Private Model

Can get direct access to all the data centers

Provides an organization with exclusive use of infrastructure

Public Model

Usually has the least upfront time investment

In cloud bursting, overflow traffic is sent to this model
