

Pop quiz: what is efficient

In the context of this course, what is meant by *efficient Python code*?

✓ Answer the question

50XP

Possible Answers

☒ Code that executes quickly for the task at hand, minimizes the memory footprint and follows Python's coding style principles.

PRESS 1

☐ Code that has a fast runtime, consumes a small amount of memory and can be verbose/hard to interpret (readability doesn't matter).

PRESS 2

☐ Code that returns a correct result regardless of the execution time and resource consumption.

PRESS 3

 Take Hint (-15 XP)

Incorrect

Developing a solution that works is good; developing a *correct* solution that is fast and has a small memory footprint is better!
