

Exercise

Cross field or no cross field?

Throughout this course, you've been immersed in a variety of data cleaning problems from range constraints, data type constraints, uniformity and more.

In this lesson, you were introduced to cross field validation as a means to sanity check your data and making sure you have strong data integrity.

Now, you will map different applicable concepts and techniques to their respective categories.

✓ Instructions

100XP

- Map different applicable concepts and techniques to their respective categories.

💡 Take Hint (-30 XP)

Drag the items into the correct bucket

Drop items here

Cross field validation

Row wise operations such as `.sum(axis = 1)` ✓

Confirming the Age provided by users by cross checking their birthdays. ✓

Not cross field validation

Making sure that a `revenue` column is a numeric column. ✓

Making sure a `subscription_date` column has no values set in the future. ✓

The use of the `.astype()` method. ✓
